

In an effort to improve the quality of health care across the nation, the National Committee for Quality Assurance (NCQA) created the Healthcare Effectiveness Data and Information Set (HEDIS®) more than 25 years ago. HEDIS® consists of more than 90 measures across six domains of care and is used by nearly all the nations' health plans to evaluate their performance. HEDIS® measurements are essentially technical specifications that define how to calculate rates for important quality indicators.

The Centers for Medicare and Medicaid Services (CMS) use HEDIS® data to monitor and rank managed care organizations' performance and compare health plans through their Stars Performance Program. The Stars Performance Program uses 46 of the 90+ HEDIS® measures to measure a plan's overall performance in multiple areas such as clinical care, customer satisfaction, plan performance, and more. Note that each measure has an assigned 'weight,' with some measures determined to have a more significant impact when demonstrating quality performance.

Top-performing plans set the bar for determining the categories or 'Star ratings' that plans receive. Star ratings range from 1 to 5, with 1 being the lowest and 5 indicating a top-performing plan. CMS posts health plans' Star ratings on their website annually.

Including the specific CPT II code(s) for these services when submitting a claim will greatly reduce the number of medical records requested each season as part of our quality programs. For more information regarding measure specifications, please visit www.ncqa.org.
